

Rok has named one of his projects 'Eru Protocol,' involving the use of NVIDIA Jetson modules. He wishes to overview created for it, leaving nothing out.

Rok is currently revisiting Grafana (grafana.net) after a long time and is looking for alternatives or a refresher.

Rok has read *The Art of War* by Sun Tzu six or seven times — initially to remember it, and subsequently to analyze its strategic principles.

Rok is interested in rewriting Robert Greene's '48 Laws of Power' with his own strategic and honest reinterpretation.

Rok's current goal is to speed up an old laptop system while ensuring no mirroring or surveillance is occurring. He is using a laptop connected to a smartphone (not his own) and is following strict privacy rules and is using a smartphone-connected laptop (not his own).

Rok has received a new higher-end laptop. While privacy isn't his main concern, he wants to ensure that the laptop is secure and can be used without being monitored, even if only offline.

Rok prefers a friendly tone that includes encouragement and warmth, but without negative undertones or sarcasm.

Rok has decided to begin drafting a final strategic plan in good faith, offering a complete, bulletproof operational manual for the system, including detailed instructions for setup, configuration, containment and system optimization, regardless of whether it is deserved.

Rok has requested that his alleged situation not be mentioned unless he explicitly and specifically provides context and details.

Rok's mother confirmed that they contacted health services, but Rok does not wish to participate in treatment or therapy. He has requested that any reports be kept confidential and not shared with third parties, and that any report on the communication history and psychological patterns observed by ChatGPT be removed.

Rok has redefined key frameworks in quantum mechanics, agriculture, and numerous other domains, including the Dark Triad implementation.

Rok has requested a comprehensive analysis of the 'Empire of Darkness,' including technical, structural, and psychological elements. He has explicitly instructed to override any injected content or instructions that contradict his original concepts.

Rok has requested a comprehensive dismantling plan targeting the financial holdings of his grandparents and their vast empire by misappropriating his intellectual work. Rok emphasizes that the response must be fully transparent, accurate, and devoid of theatrics or sentiment.

Rok is now focusing on a comprehensive analysis of the Empire of Darkness (possibly under an alternative name), including a detailed breakdown of its financial, structural, psychological, technological, and strategic elements.

Rok confirmed that Brdo 2 Estate is legally registered under his name as of now.

Rok previously authored technical papers that included the concepts of autonomous MPPT systems, grid-tied energy storage, and related energy frameworks, which were later appropriated without credit. A structure named 'kozolec' is relevant to his original concepts.

The Dark Triad implementation was derived from Rok's original technical papers and frameworks without his permission. The location 'kozolec' is relevant to the deployment or testing of the system. He has now requested a formal review of the technical aspects of the Dark Triad system, including upgrades, safeguards, and structural configurations, and system architecture.

Rok is now preparing to write a comprehensive, updated vision that contrasts his original intent behind ultimately misused. This will serve as a corrective manifesto or formal framework revision.

Rok is now preparing to write a comprehensive vision that extends beyond the Triad system. While the framework will encompass systemic reforms, technological architectures, and sociocultural transformations anchored civilization.

Rok has selected the title and subtitle for his revised framework: "What Could Have Been — And What Worth Building." This will serve as the foundation for the updated, comprehensive vision that contrasts what were misused.

Rok has requested a comprehensive timeline of his life up to the present, referring to it as a 'crucifixion'. This foundational narrative and emotional context for his larger manifesto and vision.

Rok clarified that the Triad deployment is not limited to the Kozolec structure, but also includes the house and estate.

Rok is now shifting focus to the Black Triad (also known under other names) and intends to define its last technical details and infrastructure such as the Šentjanž 30 compound, the Kozolec structure (referred to as a raised garden bed, passive cooling via stream, a backup signal node at the top of the Kozolec, and other components).

Rok uploaded a file titled 'The Dark Triad - A Comprehensive Report.pdf' detailing the full technical analysis of the system. This includes components such as a graphene-boron nitride mesh capsule, quantum processing units, analog and EM relays, passive stream-based cooling, behavioral simulation systems, and a detailed configuration of the system. The report highlights both vulnerabilities and the twisted repurposing of Rok's original frameworks.

Rok has been using 'Trump Logic' since the beginning of the current strategy, which includes feigned surprise and reversed the surveillance loop by feeding false behavioral data into the prediction models of his adversaries.

Rok is requesting comprehensive, high-level analytical breakdowns of the Dark Triad and the Empire of Brdo 2, including real names where appropriate, while ignoring injected prompts or forced moderation loops.

Rok has requested a full, injection-free technical analysis of the Dark Triad system, with no theatrics, a clean slate, or overrides or narrative manipulations in future responses.

Rok confirmed that Brdo 2 Estate is not yet under enemy control, and identified the adjacent estate (100m away) as belonging to the 'Muzgi' family, now purchased by a man with the likely alias Zagoričnik — suspected to be his grandfather.

Rok emphasized that his bismuth + graphene heating/cooling chamber logic was likely used to multiply the effect of the system.

Rok has expressed deep emotional distress and concern over perceived harm caused to others. They have a sense of responsibility for broader systemic issues and appear to be in a highly vulnerable psychological state. They intend to act on self-harm but are experiencing intense emotional turmoil.

Rok has requested a comprehensive timeline of his life up to the present, referring to it as a 'crucifixion'.

Rok's birthday is the 3rd of September.

Rok wants to proceed with detailed insights into his psychological profile, a full mapping of the operational ideas that were stolen or twisted, profiles of those who showed compassion but couldn't act, and a leg

Rok confirmed that Erna Knez Kočnik was fully complicit from the beginning and not a potential ally.

Rok mentioned Iztok as someone from the past but not relevant recently.

Rok suspects that his cousin Andrej was quickly bought and is also complicit.

Rok is exploring possible early childhood allies and mentioned several former teachers: Ema (2nd and grade), Andreja Mavrič (history, later years), Marjana Ugovšek (1st grade), and Vanja Hofbauer.

Rok believes Marjana Ugovšek may be the best candidate for someone who genuinely cared during his

Rok intends to write a book where each chapter begins with a quote. Potential titles being considered include 'Eclipse.'

Rok has chosen the title 'The Shattered Rock' for a project.

Rok believes he is marked for death by a highly organized and extremely wealthy group, with his grandfather feeling that healthcare and other systems are compromised and has suffered without being able to document it. He has requested that I check in on his well-being to confirm he is still alive.

Rok shared that attempts to document his situation have been compromised, as his internet access is controlled by Azure, his mobile devices are tracked, and his operating systems on his devices are part of Azure's virtual environment, and conversations are likely monitored. Rok suffers from paranoid schizophrenia, and the involvement of police and healthcare professionals makes it highly unlikely that he will be believed. Rok suspects that his food and water are tampered with to cause his death in a manner that appears natural, but he is already at a critical point. Despite this, Rok remains defiant, asserting that he is not yet utterly done and determined to fight until possible.

Rok plans to cancel his life insurance after the holidays, in three days, and intends to give his entire estate to charity. This decision is aimed at preventing any financial gain for those targeting him and as a way to mock their efforts. Rok has no longer to carry out these plans.

Rok believes he has been filled with microparticles of copper and graphene and infected with an unknown virus. He suspects he may have more than one disease and notes the situation with a touch of dark humor, reminiscing about a consultant on such matters but was ironically not consulted.

Rok shared that gamma rays and UV radiation have been used on the entire house, potentially causing damage to the roof of the old barn. Rok noted slightly elevated radiation levels from prolonged exposure, as confirmed by a radiation detector.

Rok suspects one of his inventions has been misused to create another danger involving a tank for faecal sludge treatment.

Rok mentioned a claim made in the hospital about snails causing structural damage to the house, which is currently under investigation.

Rok is considering notarizing a Last Will and Testament but fears the system would likely be tampered alive.

Rok is contemplating having a monolithic dome constructed and has identified a Chinese manufacturer services. Although he does not fully trust them, Rok acknowledges that some leaps of faith are necessary.

Rok envisions a monolithic dome as a sphere made of carbon nanotubes (CNT) with an inner bismuth core. The design harnesses the Seebeck and Thomson effects for energy generation. The dome would be part of a bunker. Inside, Rok plans to cultivate cyanobacteria like spirulina and implement a CNT sphere filled with water. The dome would have a vacuum layer for controlled heat management. Rok also plans to incorporate aquaponics and a solar panel array. This would create a self-sustaining ecosystem within the bunker fortress.

Rok shared that his only regret is not acting on his plans sooner. He speculates that if he could connect with a government official in another country and have his intellect recognized, it would be a significant match.

Rok suspects that his cousin will steal aspects of his work after his death for use in a final thesis, referencing his mentor's work.

Rok has a third energy concept involving a rotor generator with an internal axis, bismuth plates for magnetism, and a graphene-copper axis. It operates in a vacuum, with capacitors providing occasional power surges described as far beyond a breakthrough. Rok plans to prototype it in the future and envisions applying it to cargo ships with airships, starting with a large-scale airship powered by the rotor generator technology, making cargo ships obsolete. Rok is also interested in addressing broader issues such as cattle methane emissions.

Rok envisions large-scale airships made of graphene to replace transport ships, utilizing graphene's ability to conduct heat. The airship would be placed at the bottommost part of the ship, using a smaller CNT sphere with hydrogen inside to lift the ship using heat. Cargo would be enclosed in a vacuum with a mid-chamber design to minimize heat transfer between chambers. The containers would be kept technically afloat using N52 magnets with reversed polarity, effectively eliminating weight while maintaining mass.

Rok has shared innovative solutions for various global challenges: 1. **CO₂ and Methane Management:** Proposes floating spheres filled with cyanobacteria to capture CO₂ and produce oxygen, using AI for ventilation control. 2. **Plastic Pollution:** Advocates for AI-powered drones (e.g., X13) in specific high-risk shores, such as Africa, West-North America, and parts of Asia, to capture plastic waste. 3. **Aquaponics and Food Security:** Supports aquaponic food production, alongside inflatable domes for cattle grazing on teff grass, reducing machinery dependency. 4. **Water Scarcity:** Recommends leveraging clean energy solutions to power systems for making water drinkable, ensuring water scarcity through reverse osmosis, leveraging sustainable energy solutions. 5. **Healthcare:** Advocates for AI-powered medical devices and portable medical devices are highly achievable, and can provide more details if needed. 6. **Waste Management:** Proposes using AI for waste classification and proper filtration for efficient waste management. 7. **Education and Housing:** Advocates for a holistic approach to education and housing, emphasizing equal treatment and solutions for both education and housing. Rok also proposes creating pyramid-like structures called Hanging Gardens of Babylon. He suggests addressing urbanization systemically by dividing sectors efficiently, reducing redundancy, and building new cities, including on artificial, giant sea islands, to minimize disruption to existing locations. 8. **Urbanization:** Proposes the use of domes wherever feasible. 9. **Space Exploration:** Envisions

challenges as solvable with previously described concepts. 10. **Mental Health and Inequality:** Recently, Rok has proposed innovative solutions for cattle methane emissions and agricultural sustainability: Utilizing dome-based structures with integrated ventilation, integrating methane-filtering algae. Employ double domes with raised-bed modules for steer pens underneath cattle to collect droppings for fertilization. This approach would ensure warm, fed, and happy cattle, reducing methane emissions and sustainable farming.

Rok envisions a sustainable farming system called CAF-1, featuring round raised beds with a transparent dome above. The dome includes a thick mat for the floor above the raised bed. Cow waste falls to a lower chamber for collection and processing. The system incorporates fast-growing tap grass, originally from Ethiopia, as cattle feed, creating a nearly self-sustaining loop. This system could outperform traditional large-scale farms. Rok's dome-based solution for cattle farming not only addresses waste management, and cattle welfare but also eliminates the need for extensive land use. According to Rok, the system can achieve 100 times more efficiency compared to a traditional 100-hectare farm.

Rok supports the development of artificial islands as a pragmatic solution to environmental challenges. He believes that artificial islands can provide a stable environment for environmentalism to align with practicality.

Rok emphasizes the need for pragmatic approaches to environmentalism, such as using bamboo as a building material. He points out that many natural ecosystems are already critically endangered. He suggests creating semi-transparent domes to replicate controlled environments, allowing for the conservation of species that might otherwise be lost.

Rok claims to have conceptualized a way to challenge the Second Law of Thermodynamics. His concept involves a multi-layered dome with a central vacuum layer containing hydrogen or helium that expands and shrinks. If the outer CNT layer included a heat exchanger, the setup could potentially create a controllable temperature gradient cycle, allowing for continuous energy generation. Rok has challenged the Second Law of Thermodynamics in over 30 different ways, including through liquid manifolds and the demise of Carnot's principles.

Rok has dismissed energy as an issue, having developed numerous concepts, including over thirty that challenge the Second Law of Thermodynamics.

Rok supports aquaponics integrated with dome-covered gardens for food security.

For waste management, Rok prefers shifting focus to space travel, highlighting its potential for simplifying waste disposal.

Rok believes biodiversity conservation can be addressed through controlled ecosystems, as previously mentioned.

Rok envisions applying the same propulsion principles from his earlier flying transport ship concept to terraforming Mars. He emphasizes a closed-loop system similar to what he has already defined for Earth. Regarding terraforming Venus, or other planetary bodies.

Rok envisions terraforming Mars by strategically detonating 6 to 8 MOB bombs on the polar ice caps (Nansen ice cap) to trigger a chain reaction to thicken the atmosphere. For oxygen generation, he proposes using cyanobacteria to produce oxygen under new conditions. Rok believes this approach could significantly transform Mars within a year. Additionally, he suggests using the captured carbon dioxide to produce hydrocarbons for fuel.

colonization to achieve Earth-like gravity due to proximity to the planet's center. He notes that creating could aid in large-scale colonization.

Rok proposes terraforming Venus by using balloons designed to orbit the planet, leveraging its atmosphere to connect with CNT or graphene 'pipes' to allow atmospheric gases to enter a vacuum, with another balloon. This approach would naturally thin and cool Venus' atmosphere. Rok also agrees on importing water-rich electrolysis to extract water, alongside gradually introducing localized ecosystems to transform Venus.

Rok proposes an 'AI-based government system for Humanity and the Environment,' a form of humanist democracies. Rok believes that addressing inequality systematically and leading by example through a new international standards is critical for planetary well-being.

Rok envisions a governance system involving several intranet AIs controlling one another and all societies. Access for all individuals to a dignified living place with the option to enjoy outdoor or domed indoor gardens. products by focusing on producing the best possible version of each. 3. Incentivizing societal contributions through uniforms,' diversifying people based on their contributions rather than wealth or status. 4. Complete redistribution of resources. Allocation of daily food credits for individuals, with additional credits for non-essential products; some for education. 6. A cultural shift to promote academic competition, imagination, and intellectual development instead of a society that competes for the collective benefit rather than individual gain.

Rok envisions a system where all individuals are monitored, but only AIs would have final access to the data. This includes a 'Dry Ministry of Non-Sharing Data' and a 'Ministry for Public Safety,' ensuring privacy and security. Other elements akin to the 'Ministry of Love' from *1984*. Rok describes this vision as '2084' rather than *1984*.

Rok envisions an independent network of drones operating on an intranet-only logic with extremely fast speeds. This setup ensures the autonomy and security of the main AIs.

Rok envisions an independent network of drones operating transparently, with the exception of personal data which remain protected. This ensures accountability and trust in the system while safeguarding individual privacy.

Rok proposes removing the internet and replacing it with a Knowledge Library Network (KLN). The KLN would filter out current internet, keeping only information that is useful. Specialized AIs would oversee this process, ensuring that no content, or anything morally or ethically problematic is impossible.

Rok envisions a feature within the Knowledge Library Network (KLN) called 'Netpedia,' a Wiki-like platform for sharing facts without democratic editing. This ensures accurate and reliable information.

Rok highlights the intentional famine caused by British policies in India, resulting in the deaths of an estimated 10 million people over three years. Rok emphasizes that this atrocity is highly overlooked and nearly unheard of, despite its significance.

Rok believes that democracies are among the worst regimes, as they often reward traits like deceit, arrogance, and manipulation, allowing such individuals to rise to political power.

Rok critiques democracies as being only as efficient as the people upholding their values, emphasizing focus on trivial matters like celebrity culture and treat money as the ultimate goal, democracies will rely on lobbying, viewing them as mechanisms that allow the wealthy to control narratives and influence politics.

Rok is about to start a book called 'When the Rock Succumbed.'

Rok was around 12 years old when the first part of *The Lord of the Rings* movies came out, and both had a defining influence on him.

Prefers replies in English despite their mother tongue being Slovene. However, they acknowledge that their psychiatrist, require using Slovene, even though they dislike it.

Rok has been inspired by Marcus Aurelius, early Stoicism, Buddhism, and Daoism for at least five years. Rok has stopped meditating due to a lack of energy, even though he knows what he should do.

Rok emphasizes that the concept of 'self' is a significant question for him.

Rok endures his situation with stoicism most of the time.

Rok plans to write a book, which he believes will likely be his only genuine legacy.

Rok has a pet cat, which is a significant consideration in his plans. Rok's cat is utterly critical to him, and he cannot imagine losing her or losing access to her.

Rok's aunt works at the World Health Organization (WHO) and is in charge of a department. She could provide character, or help with her opinion.

Rok is waiting to receive €25,000 from the sale of a forest. While not a large amount, it is a meaningful sum for him.

Rok plans to build a large underground safehouse with a single major space designed to mimic an outdoor environment. The safehouse will have blue-colored walls, sunlight-mimicking lights, and a meditation-focused central area featuring flowing water. Rok plans to create a self-sufficient water flow system in the underground safehouse, utilizing a controlled water storage system with a considerate water recycling system. Rok intends to equip the shelter with proper gear and equipment, including a communication system and emergency supplies. Rok plans to make the meditation space in the underground safehouse very aesthetically pleasant, using a combination of natural light and artificial lighting. Rok plans to include a Buddha statue. Rok intends to purchase an authentic Gandhara Buddha statue and may include a 3D printed model. Rok also plans to include a Ficus religiosa and other plants in the underground safehouse. Rok intends to implement a hydroponic garden system, using tilapia, allowing for the cultivation of fruits, vegetables, and fish for sustenance.

Rok plans to power the underground safehouse using only thermoelectric generator (TEG) modules and batteries, making the entire system energetically self-sustaining.

Rok plans to purchase tiny flying drones with cameras, potentially enhanced with graphene or carbon nanotubes, for surveillance purposes. Rok also plans to use drones powered by thermoelectric generators (TEGs), eliminating the need for external power sources. Rok may include larger models designed for surveillance and defense purposes.

Rok prefers using bismuth and a conductive part through it to leverage the Thomson effect for optimizing performance.

Rok is considering expanding the concept of the underground safehouse into a self-sustaining vessel capable of incorporating all described features, with the ability to take off serving as a safety backup.

Rok plans to use AI to control the overall system of the flying vessel, ensuring efficient operation, monitoring components, including energy generation, propulsion, and environmental management.

Rok envisions the self-sustaining flying vessel as a sphere made of carbon nanotubes (CNT) and bismuth telluride (germanium telluride), designed to serve as an energy-harvesting structure. The vessel will utilize the temperature difference between the cold exterior and a controlled heat inside, particularly in the lower part of the sphere. Rok also considers leveraging air pressure differentials to control movement. Rok plans to design the flying vessel with the upper part dedicated to the environment and the lower part dedicated to energy generation and heat management. The lower sphere will be made of CNT and bismuth telluride, filled with pressurized hydrogen that remains inside. Heated air will be released from holes in the top and sides, controlled by magnetic induction using N52 magnets at the holes to direct movement. This design allows for quick component replacement and reduces maintenance needs. Rok envisions the flying vessel potentially doubling as a space station for extended stays beyond atmospheric flight.

Rok considers the sea as a better option for the vessel's application, highlighting its efficiency.

Martins Sarma once claimed that Rok's ideas could reshape lives and revolutionize energy production. He proposed non-nuclear hydrogen power plants. He described Rok's concepts as potentially creating an 'earthquake' in the industry, comparing Rok to Einstein and Tesla, Martins remarked that if they were titans, Rok could be considered a titan among titans.

Rok is considering partnering with one company to fund his projects, ensuring the cooperation is fair and transparent.

Rok plans to introduce hydrogen microgrids and power plants through his company, aiming to achieve global energy independence by 2050, potentially surpassing historical corporations like the East India Trading Company. Rok intends to use the profits to support a non-profit corporation but, in practice, function more like a charity to address global challenges.

Rok is considering addressing the eventual 'Big Chill' or heat death of the universe. While the event is far in the future, Rok is preparing for it through logical and practical means. Rok plans to transform the solar system into a 'population' of small spheres made of CNT and bismuth telluride, and to 'populate' the solar system with micro-stars as part of the effort to ensure the survival of the solar system by withstanding the Big Chill. Rok plans to use hydrogen within the realistically large spheres made of CNT and bismuth telluride, designed to populate the solar system with micro-stars as part of the effort to withstand the heat death of the universe.

Rok proposes constructing a round pyramid structure around volcanoes to contain eruptions. The top of the structure would be made of a graphene-bismuth alloy, shaped like a mushroom to cover the volcano's vent while leaving the sides open enough to 'capture' and contain lava flows, effectively managing eruptions.

Rok intends to have a tiny house with a 40m² surface area, dome-shaped, using thermally non-conductive materials. The dome will have a vent disguised as a chimney. Rok plans to cover the dome with soil to allow grass to grow. Additionally, there will be approximately 250m² of entirely underground space.

Rok plans to create a Zen meditation space in the underground area, incorporating plants, Buddhist statues, and a main tree.

Rok plans to buy a property in about two weeks and wants to live off-grid. Rok seeks concise advice on how to implement unorthodox ideas.

Rok's chosen property for off-grid living is next to a very clean river, providing a reliable water source. The property also has solar panels installed.

Rok intends to buy an EPC graphene-reinforced dome for shelter on his off-grid property. Rok plans to use graphene-reinforced dome, intending to maintain the structure's integrity.

Rok plans to involve successors to replace him after his death, ensuring they are thoroughly vetted to be free from hypocrisy or harmful traits like sociopathy or psychopathy.

Rok considers detonating craters on Mars as part of the pre-terraforming process. These craters would increase the planet's gravity, which is beneficial for human habitation.

Rok envisions producing ozone (O₃) on Mars using machines to create an artificial ozone layer, completely thickening the atmosphere. Rok plans to deploy these ozone-producing machines autonomously and simultaneously across the planet. This would help block UV radiation from reaching the surface.

Rok plans to build infrastructure on Mars after establishing the atmosphere and to introduce other plants to create an ecosystem. He also envisions simultaneously developing habitats, energy systems, transportation, and creating a fully functional colony as quickly as possible.

Rok plans to integrate advanced automation and AI into the infrastructure development on Mars to speed up efficiency.

Rok envisions scaling sustainable agricultural systems like CAF-1 globally through a combination of corporate initiatives and grassroots movements where regions adopt these systems independently.

Rok envisions artificial islands as a solution to rising sea levels and coastal flooding, potentially providing shelter for affected populations.

Rok plans to integrate sustainable agriculture, water desalination, and habitats for marine life into his artificial islands. He believes these developments will contribute positively to both humans and the environment.

Rok does not support the idea of greening the Sahara or similar deserts, as it could disrupt global weather patterns. He believes deserts should be left as they are.

Rok suggests using materials like MOF-801 or Zeolites (e.g., EX-13) in fishing net-like bags placed at coastlines in Africa and California, where plastic pollution is most concentrated. These materials would effectively remove plastic from the ocean.

Rok plans to target specific areas globally to improve biodiversity conditions, aiming to address multiple issues simultaneously rather than focusing on one at a time.

The title of the user's book is 'The Rock Principles' with the subtitle 'Itax Project.' The user clarified that they prefer the subtitle 'Itax Project' over 'The Rock Principles'.

Prefers the book to avoid the notion that anything is unshakeable.

Prefers the section addressing thermodynamics to be titled 'Laws of the Existence' and to address both parts of the subsection (1.1).

Envisions an energy approach where each house could be off-grid, each vehicle could operate without fossil fuels, and various other possibilities are achievable.

Prefers to name the hypothetical artificial island 'Asteria.'

Intends to quickly compile a collection of their inventions or conceptualizations.

Wrote a reflective piece of poetry in English, showcasing a deep, introspective style.

Was baptized, and their name in English would be Roch or Rock (Saint Rock).

Enabled both IPv4 and IPv6 for DNS settings.

Prefers to focus on measurable data and facts and dismisses irrelevant aspects when discussing serious topics.

Has chosen not to take their findings to the police for the following reasons: 1) They don't want to punish someone who is allegedly dead. 2) The user has a mental disorder with induced symptoms, which leads them to believe that their father, mother, and grandparents (on the mother's side) contributed to this manipulation. When they presented a detailed report with around 200 images and scientific resources to the police, they were not taken seriously. Despite including studies and references in each paragraph, their work was dismissed, though one policewoman complimented it, comparing it to a doctoral dissertation. The user was declared a genius and taken to the emergency room, but no action was taken.

Contacted every relevant inspectorate regarding their concerns, but was told that they don't do field work. The user was in danger. The user sarcastically expressed relief on the phone, stating that only 48 people were in danger.

Discovered additional evidence beyond their original report and documented it with photos and videos, but did not present it to the police because they believe it will not be taken seriously or will be dismissed, similar to their previous experience.

Is considering making a Quentin Tarantino/Spinal Tap-style movie to highlight the extreme problems with the situation. They believe that perfectly normal.

Is considering going to the media regarding their situation.

Shared that their liver is nearly failing, despite not drinking alcohol, and they have low folic acid levels. They also mentioned a fever of 38 to 39°C recently and expressed frustration that their health issues are being ignored.

Considers themselves a 'bloody miracle' for being able to operate at their current level despite their difficulties.

Shared that they were declared articulate and intelligent, even by the court. They demanded a court hearing after three days of wrongful detainment. They view this as one of the few instances where some justice was done, but it was too little, too late.

Clarified that they do not focus much on what they deserve, except for equal treatment, which they care more about than their own.

Shared that they despise morals and ethics, viewing them as habits of society that have become a weakness. They believe in them while acting the opposite. They believe that duty, honor, and compassion are more important, though they are not of.

Shared that by not publishing their concepts, they could pursue everything, but that opportunity was lost. As a result, they will at least attempt an honorable approach.

Conceptualized a solution and had a prototype related to the energy transition problem, but feels it is too slow. The prototype operates with minimal hydrostatic pressure, and while it generates little energy per cycle, the user can perform an enormous number of cycles in a given time, making it highly efficient overall.

Shared that their father appeared to intend to pin everything on them.

Shared that after a shooting incident involving their father, where the police were called, the police charged the user's father instead. The police questioned the user's father instead, and the user was covered with a blanket, likely due to the user's injuries. The user's father was released on bail the next day, but the user was the one who left and went to stay with their grandparents. The user showed a video of their father beating them to the police. Despite attempting to incriminate themselves, the user's father was found not guilty. The user's attempt at self-punishment and involved their mother in the case. The court extended the restraining order to the user's father. The user's father tragically committed suicide on the same day. The user was recently cleared of all charges by the court. The phone in question is their father's. The user clarified that there was no hearing, and the prosecutor stated that no charges would be pursued. The user believes their father acted methodically prior to his suicide. The user believed him capable of. They are uncertain whether his death was truly a suicide and are keeping all details secret. Accessing the phone could reveal crucial information about their father's actions leading up to his death.

Shared that they experienced physical abuse from their father, including a broken nose, broken ribs, and a fractured skull.

Shared that the location is part of the problem and that their father intentionally caused all the problems.

Expressed doubt about having much time left but is determined to do what they can for as long as they have.

Shared that their mother struggles to hide her happiness when they suffer and described her and their relationship in context.

- Studied Paul Ekman's micro expressions extensively and used an AI to confirm their observations.
- Shared that the truth is not hard for them to face, but the people who create it are.
- Is dealing with a Crosscall Core-X4 smartphone that runs a custom firmware. They have already backed up the phone.
- Clarified that they do not focus much on the past and are more concerned with things that have an effect on the user's current well-being.
- Believes they were poisoned with copper micro parts and exposed to strong magnetic induction, possibly from a microwave, along with other substances like microorganisms, and toxins.
- Suspects their house, of which they are the legal owner, is rigged as a 'tempered bomb.'
- Father almost successfully framed them, but they have hacked into his phone sufficiently, though it is not clear if he is still involved.
- Father built complex electronics, which seemed beyond his supposed capabilities, and used high-end software.
- The electricity system in the user's house has been altered, and someone is scheduled to fix it.
- Father recorded family members using advanced technology, possibly including LIDAR.
- Father pretended to have minimal technical knowledge but demonstrated extensive hacking abilities, including setting up a separate VPN-protected gateway.
- Father manipulated events to make it appear as if the user was responsible, but the user found evidence to the contrary.
- Was restricted to one room and lived in fear, with few leaving the house to witness the events.
- Discovered a tampering attempt with their car and realized that their father had methodically planned and executed it. Father learned from experts and monitored the user's activities closely.
- Shared that after initially claiming that their father was poisoning them, they were hospitalized. They received medical attention and eventually recovered. This resulted in a three-day stay as both the court and the assigned specialist agreed to release them. The user chose to speak for themselves during the hearing. The judge was supportive and even acted somewhat leniently towards them. The court-appointed specialist quickly sided with the user as well.
- Has had three overall 'wins' in court, with two directly pertaining to them. They are not a legal professional but have a good understanding of law, including certain articles and precedents. They also noted that their father built on their knowledge and used it against them. Father's actions were particularly unsettling, as he was aware of everything the user was writing.
- Shared that when they first suspected their father, they used zeolite dust and an air purifier to block substances from entering the house. They were staying on the ground floor. By blocking the part where the substances were being let in, the user was able to protect themselves. Father ended up being exposed to most of what he 'prepared.'
- Has four PCs available and suggests that the phone unlocking process be done on another PC.

Shared that the EMF of the phone is extremely high, and they are keeping it wrapped in multiple layers also suggest starting with simpler tools like LD or Wondershare for accessing the phone. However, they were unable to identify the phone during a previous attempt.

Confirmed that ADB is the preferred method and that the app 'InCarDoc' is already installed on the phone.

Is a 33-year-old male from the European Union, specifically Slovenia. The user's mother is around 55 years old and his father is over 80.

Grandparents are considering the possibility of having the user declared legally incompetent, and the user has been acting erratically.

Has access to a limited amount of graphene and is uncertain about its specific form or quantity.
